SUMMARY

Data driven AI Engineer with hands on experience in LLM systems, agentic workflows, and model benchmarking. Proficient in Python, FastAPI, and machine learning, with a strong focus on building and evaluating offline AI pipelines under real world constraints (latency, throughput, memory, and privacy). Experienced in enforcing structured outputs, designing reliable generation systems, and developing scalable APIs. Background includes geospatial AI and applied ML, with a track record of delivering practical, production ready AI solutions.

SKILLS

AI/ML	Backend & Programming	Data & Analytics	Tools & Platforms
LLMs, LangChain, Model Evaluation, Scikit-learn, TensorFlow, Data Preprocessing, Feature Engineering, Geospatial AI (ArcGIS)	Python, Java, C#, FastAPI, Flask, REST APIs, HTML, CSS	SQL, MySQL, Pandas, NumPy, Power BI, Excel, Data Visualization (Matplotlib, Seaborn)	Ollama, Git/GitHub, Jupyter Notebook, Unity Hub, CUDA, Microsoft Azure AI Foundry, Copilot Studio

PERSONAL PROJECTS

- Local LLM Benchmarking & Evaluation System (Ollama)**
- Developed an offline benchmarking system to evaluate Llama 3.2 (3B), Phi-4 Mini, and Mistral 7B on identical hardware, measuring tokens/sec, time to first token, and total latency.
 - Implemented structured JSON output enforcement using Pydantic with retry logic for deterministic generation. Conducted temperature based variance analysis (0-1) and a model comparison study across 30-50 prompts, analyzing performance, memory usage, and output quality to identify real-world tradeoffs in privacy first, low latency AI systems.
 - Tech Stack: Python, Ollama, FastAPI, Pydantic, NumPy, Pandas, Matplotlib
- Line Follower Robot**
- The main objective of this project is to efficiently navigate the robot along the specified track with full autonomy, earning maximum points upon reaching each milestone. This involves maximizing speed on curves and corners, consistently following the black line to achieve the quickest completion time, and automatically pausing to avoid collisions with obstacles until they are cleared, after which the robot will resume its path autonomously.
 - I was responsible for coding in python, the robot's line-tracking functionality using & sensors in the qtr-8a array sensor at the bottom front of the robot to detect the line and then send the signals to the robot to follow the line. I also added an Ultrasonic sensor that will detect any object infront of the robot and send a signal to the robot to stop.

WORK EXPERIENCE

Interdisciplinary Research Intern Lockheed Martin CISS	10/2025 – Present Abu Dhabi
- Working on developing simulations for product demonstration system which is used at airshows and tradeshowes using Unity Hub. - Added UI features to the game and functionality for it as well. - Developed an AI-powered system leveraging constrained LLM generation (GPT-OSS-20B & Ollama) to automate the game scenario creation reducing generating time from minutes to seconds. - Implemented an agentic editing pipeline using JSONPatch, enabling natural language manipulation of scenarios and seamless integration with the app via a FastAPI API.	
Intern 4i Apps Solutions, Dubai	05/2025 – 09/2025 Dubai
- Configured payroll definitions, elements, ICPs, and tested payroll components for accuracy. - Created HR/payroll documentation, customized DFFs, and designed offboarding workflows. - Integrated policy documents and enabled AI Assist & HCM Digital Assistant features.	

Intern <i>Conneqction Group, Dubai</i> - Configured Core HR, Absence Management, enterprise structures, and approval workflows in Oracle Fusion HCM. - Managed employee records, roles, AORs; performed bulk data uploads with HDL. - Applied REST APIs and PL/SQL for HCM data integration and validation.	01/2025 – 05/2025 Dubai
Intern <i>Smart Navigation Systems, Abu Dhabi</i> - Worked on indoor routing, BLE integration, and ESP32 programming. - Applied geospatial AI in ArcGIS and built real-time APIs with Flask and Twilio. - Gained experience with digital twin technology for urban planning and simulations.	01/2025 – 04/2025 Abu Dhabi
Intern <i>DMCC, Dubai</i> - Worked on multiple Oracle Fusion modules (Core HR, Absence, Performance, Recruitment, Payroll) and developed custom BI reports. - Gained exposure to Salesforce CRM, including administration, Service Cloud, and Community Cloud.	06/2023 – 08/2023 Dubai
Intern <i>Finesse Dubai, Dubai</i> - Gained hands-on experience with RPA using Automation Anywhere, building scalable bots and automating workflows. - Extracted data from HTML pages using DOM Xpath and loops.	07/2022 – 08/2022 Dubai

AWARDS	
Vibe Coding Hackathon <i>NYU Abu Dhabi and NYU Shanghai</i> Won the second-place prize for the Launch track in the 2025 Vibe Coding Hackathon for building an application that allowed University students to carpool and earn an small additional income.	10/11/2025
FINSPIRE 1.0 Hackathon <i>ACM BPDC Chapter @ BITS Pilani</i> Won 1st Place for building Ripple , an AI-powered web app analyzing how oil price and currency shifts impact investment portfolios across the GCC. <i>Tech: Next.js, TypeScript, Flask, Python, Ollama LLM.</i>	12/10/2025

EDUCATION	
Bachelor of Science in Computer Science <i>United Arab Emirates University</i> 3.36 / 4.00 CGPA	08/2021 – 05/2025 Al Ain, Abu Dhabi, UAE
The Indian High School - Senior School Certificate Examination - June 2021-91.6% - Secondary School Examination - June 2019 -90.2%	04/2017 – 06/2021 Dubai, Oud Metha, UAE

CERTIFICATIONS	
[PCEP-30-01] PCEP-Certified Entry-Level Python Programmer Python Institute - Salesforce Certified Associate - Trailhead - Oracle Fusion AI Agent Studio Foundations Associate Rel1-BETA (1Z0-1145-0)-Oracle	[PCAP-31-03] PCAP-Certified Associate in Python Programming-Python Institute - Salesforce Certified Administrator-Trailhead - Microsoft Azure AI Fundamentals - Training
